

100% Available Flat Curves Injection and Withdrawal Capacity Service

HGS aims to provide additional (above the existing injection and withdrawal capacity) flat curves, 100% available injection and withdrawal capacities for the System Users, thus making the scheduling of injection easier, the storage target stock simpler to reach and withdrawal easier to plan. Requests for 100% available injection and withdrawal capacities can be submitted to HGS at any time during the storage year. If the request can be technically fulfilled in part/in full, the System User will receive a confirmation. The fulfilment of a partially confirmed request shall represent an obligation for HGS following its acceptance by the System User. Capacity requests that can be fulfilled within the technical parameters shall be allocated on a *First Come First Served* basis.

Requests can be submitted for injection or withdrawal capacity, or for both, as well as for full injection and withdrawal cycle or for partial period(s).
